SUMMARY

AI/ML Engineer focused on Generative AI, LLMs, and Agentic AI systems. Experienced in building RAG pipelines, LangGraph workflows, and scalable ML APIs. Strong in NLP, Transformers, and production deployment using Docker, FastAPI, and AWS.

SKILLS

Programming: Python, SQL

AI/ML: Machine Learning, NLP, Deep Learning, Transformers

GenAI: LLM, RAG, Agentic AI

Frameworks: LangChain, LangGraph, PyTorch, Scikit-learn

Deployment: FastAPI, Flask, Docker, AWS EC2, CI/CD

Database: MongoDB, SQLite

EXPERIENCE

Software Developer Intern — QuadRise Solution LLP

- Engineered LLM-powered APIs processing 5,000+ monthly requests with low latency
- Automated ETL/data pipelines reducing manual effort by 40% and improving efficiency
- Deployed containerized ML services using Docker and AWS EC2 with CI/CD pipelines
- Built scalable backend systems supporting AI inference workflows

Machine Learning Intern — iNeuron

- Developed and optimized ML models achieving 92% accuracy for disease prediction
- Performed feature engineering and data preprocessing on 10K+ records
- Implemented real-time prediction API using Flask with sub-300ms latency

PROJECTS

Natural Language to SQL System

- Designed LLM-based system converting natural language into SQL queries
- Improved data retrieval efficiency by 60% across multiple query patterns

Medical Chatbot (RAG)

- Built RAG pipeline using embeddings and vector search over domain documents
- Reduced hallucination rate by 45% and improved response accuracy

Self-Healing Classification DAG (LangGraph)

- Developed agentic workflow using LangGraph with retry, branching, and failure handling
- Increased pipeline reliability by 50% through automated execution logic

Movie Recommender System

- Built content-based recommendation engine using Bag of Words and cosine similarity
- Vectorized metadata features (genres, keywords, overview) for similarity scoring
- Developed backend APIs using Django and frontend interface using React

Thyroid Prediction Pipeline

- Designed end-to-end ML pipeline with validation, training, evaluation, and inference stages
- Automated evaluation ensuring consistent performance across experiments

EDUCATION

B.Tech in Artificial Intelligence & Data Science (2021–2025) | CGPA: 8.56
